

Requiem for Radio: Pulse Decay.
Block Diagram

****HDMI Cable:** will likely require a signal booster, because it must be quite long to run from the Rasberry Pi upstage, all the way to the projector at the back of the venue.

***** Projection out:**
***** Projected Image :** must be at least 16 feet tall. The width will be determined by the height. Note that image files are 16:9, but the image is 4:5 with black pillar bars on the sides.

***Sound card:** can either be the provided dongle, which requires no additional power, or a standard desktop model that does require one outlet of AC power.

Only two AC outlets are required at this station, unless desktop soundcard model is used, then 3 outlets are required.
